

Updated Models

- Not much was changed with my models for the recipe app aside from adding a pic model to allow users to upload and display images of their recipes. I also tweaked the calculate difficulty model and added a class within the admin.py file in order to display recipe difficulty within the admin center of Django. This way, I could see what the difficulty was without navigating to the recipe details page.

Frontend Inspirations

- For inspiration, I looked for something kind of simple in design and liked the example provided here.
 - https://github.com/bryanevan/Python/blob/main/Achievement_2/exercise_2.5/src/screenshots/welcome.jpg

I thought it was a good starting point and would allow for space to implement new features like a login with user credentials. Here is a screenshot of their webpage.
